

QUALITY POLICY STATEMENT

Our primary objective is to utilise software-based solutions to enable our customers to drive innovation, leveraging legacy data sources with a combination of process driven automation and an intelligent, role-based user interface. To support this approach, we have tailored our business model to function as an extension of our customer's existing operations, which requires quality and information security to be the cornerstones of every engagement.

The business is focused on the convergence of two critical areas: IT operations and Data centre management, and their integration with strategic business management systems, both on-premise and cloud-based. The Federos™ product suite is at the heart of our approach, and all those associated with TDB Fusion are critical to the success of this strategy. The entire business philosophy is underpinned by the quality and efficiency with which we deliver effective customer solutions, which meet their objectives and any applicable statutory and regulatory obligations, as part of our commitment to strategic innovation and continual improvement. Quality is at the heart of TDB Fusion.
